

WHEAT

EK102

Pictured: Tack & Ag's 2017 crop, just north of Greenville, Texas.

Background:

EK102 was developed by Erwin Seed Company in Arkansas during the 1990's. EK102 is a soft, red winter wheat that has shown good grain yields which has allowed it to be retained in the wheat seed market. EK102 is a beardless wheat that is adaptive across the south and commonly used for wheat forage throughout the region. One bushel is 60 pounds of wheat.

Type:

A public variety, this beardless, soft wheat makes it absolutely perfect for grazing!

A beardless, soft wheat like EK102 is normally planted east of I-35 because EK102 is much hardier and has better disease tolerance in that specific region.

Planting:

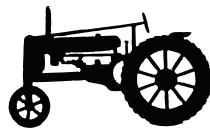

Time to Plant: Early Fall

Seed Depth: 1-2"

Seed Rate:

Broadcast 100 lbs/acre

Drill 80 lbs/acre
